

**Must-warmer** is a flexible heating cord used in vinification to catalyse alcoholic working when temperature of vintage-season is rather cold, then malolactic working.

There are 2 models of must-warmers :

**70W MUST-WARMER** : used mainly in butts from 200 to 250 l.

**500W MUST-WARMER** : used in half hogsheads or tuns from 5 to 6 hl.

For instance, in a tun from 80 to 100 hl, you must use 6 500W Must-Warmers (the more volume is huge, the less thermal losses are high).

**CAREFULL : Must-Warmer has to be entirely in the must, marks on cold leads included.**
